

LinkFixerPlus™ for Adobe® InDesign®

Automatically maintain links when you move or rename files!

Product Data Sheet

Do your InDesign files contain links to other files?

Nearly all users of Adobe InDesign have links in their documents that point to external files, such as TIF, JPG or EPS graphic files. Consequently they are often faced with a special problem: what to do when they want to move or rename their linked files. As soon as any of these files (or the folders they reside in) are moved or renamed, broken links occur.

If moving or renaming a file or a folder causes only a few broken links, the problem is not severe. The user can manually open each file and manually fix each broken link. But what if moving or renaming files or folders would cause dozens or hundreds of broken links?

Introducing LinkFixerPlus for Adobe InDesign

This is the problem that LinkTek's patent-pending product, *LinkFixerPlus for Adobe InDesign* solves. Using *LinkFixerPlus for Adobe InDesign*, an InDesign user can easily move or rename InDesign files, and the files they link to, in batch, and have all of the links maintained totally automatically!

In addition, *LinkFixerPlus for Adobe InDesign* can repair — either semi-automatically or fully automatically — links that are broken because files have been moved or renamed.

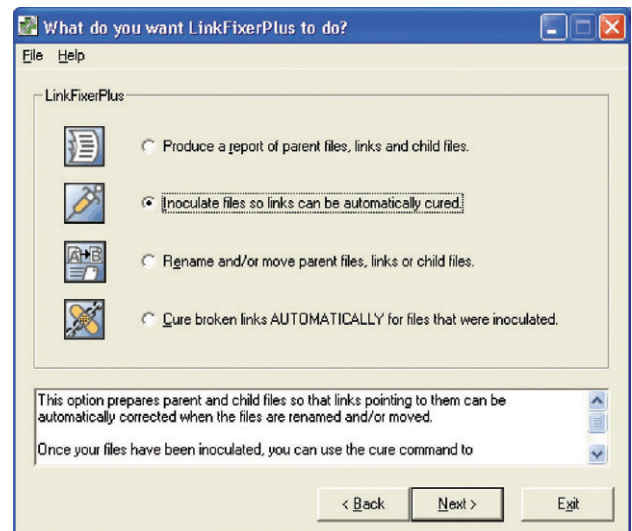

What else can LinkFixerPlus do?

In addition to moving or renaming files without causing broken links, other key features of *LinkFixerPlus* include:

- **Produce detailed reports:** *LinkFixerPlus* generates a variety of detailed reports showing parent files, the links pointing to child files and the status of each of the links.

The reports enable you to easily view links contained within supported parent file types and quickly identify which links were found to be broken.

- **Repair links fully automatically:** Once you run *LinkFixerPlus'* Inoculate command on a set of InDesign files, you can fix broken links in those files totally automatically — at the push of a button!
- **Repair links semi-automatically:** You can repair broken links quickly and easily in huge sets of files — even in files that have not been inoculated — by executing a simple, but powerful global search and replace command to modify the names of files stored in links.

LinkFixerPlus' main functions: Reports, Inoculate, Rename/Move and Cure

LinkFixerPlus — features at a glance

LinkFixerPlus for Adobe InDesign gives users the ability to:

- Rename or move linked files, in batch, using sophisticated rename rules, without causing broken links in the files that reference them.
- Safeguard healthy links in files, allowing them to be automatically repaired when they become broken.
- Fix broken links in safeguarded files totally automatically.
- Generate a broken link report listing all files containing broken links, so they can be fixed before causing problems.
- Generate a regular report listing each file followed by a list of the files it links to.
- Generate a cross-reference report listing each linked file followed by a list of all the files that point to it.
- Report whether a file is being pointed to by any InDesign file anywhere on a user's system, thereby letting the user know whether the file is safe to delete.
- Fix broken links in large sets of files with a single command using sophisticated global search and replace operations.

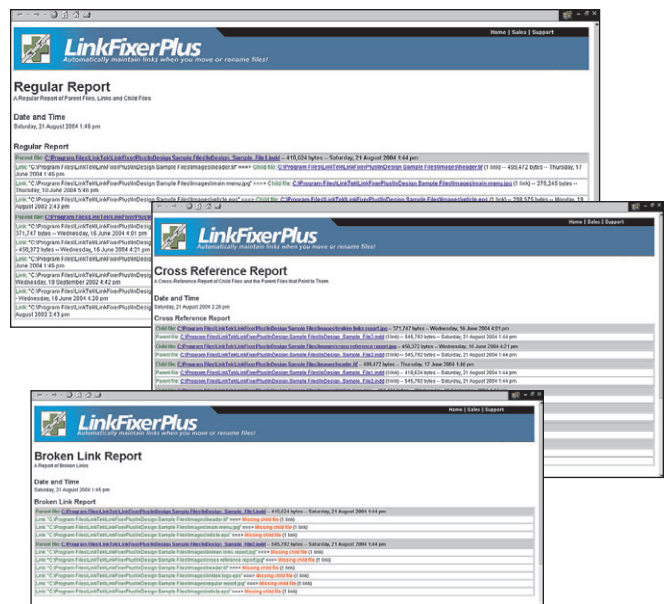

Using LinkFixerPlus for Adobe InDesign, you can speedily, dependably and easily maintain the integrity of all the internal links contained within your InDesign files.
